INDEX TO VOLUME 29

SUBJECT INDEX

*Starred items are "Shorter Notes"

A. Algebra and Number Theory

05. Combinatorics

Brualdi, R. A. *Induced matroids*, 213.

Howard, F. T. *The number of binomial coefficients divisible by a fixed power of 2*, 236.

06. Order, Lattices, Ordered Algebraic Structures

Balbes, Raymond. *The center of the free product of distributive lattices*, 434.

Carns, Gail L. *A functor to ringed spaces*, 222.

Chacron, M. *Direct product of division rings and a paper of Abian*, 259.

Morash, R. P. *Errata to "The orthomodular identity and metric completeness of the coordinatizing division ring,"* 627.

Nosal, Miloslav. *Series convergence on Boolean algebras*, 211.

Stringall, R. W. *The categories of p-rings are equivalent*, 229.

10. Number Theory

Berndt, Bruce C. *The functional equation of some Dirichlet series*, 457.

*Cohn, J. H. E. *Sums of cubes of Gaussian integers*, 426.

Subbarao, M. V. and Vidyasagar, M. *Errata to "On Watson's quintuple product identity,"* 627.

van der Poorten, A. J. *On the arithmetic nature of definite integrals of rational functions*, 451.

12. Algebraic Number Theory, Field Theory and Polynomials

Carns, Gail L. *A functor to ringed spaces*, 222.

Knopfmacher, J. and Sinclair, A. M. *Fields with few extensions*, 255.

13. Commutative Rings and Algebras

Barshay, Jacob. *A characterization of regular local rings*, 437.

Larson, Loren C. *Nonstandard theory of Zariski rings*, 23.

Seidenberg, A. *On the length of a Hilbert ascending chain*, 443.

Teply, Mark L. *A note on modules over a commutative regular ring*, 267.

Vasconcelos, Wolmer V. *Annihilators of modules with a finite free resolution*, 440.

14. Algebraic Geometry

Gilmer, Robert and Mott, Joe L. *An algebraic proof of a theorem of A. Robinson*, 461.

15. Linear and Multilinear Algebra; Matrix Theory (finite and infinite)

Au-Yeung, Yik-Hoi. *On matrices whose nontrivial real linear combinations are nonsingular*, 17.

16. Associative Rings and Algebras

Barshay, Jacob. *A characterization of regular local rings*, 437.

Chacron, M. *Direct product of division rings and a paper of Abian*, 259.

Lenzing, Helmut. *A homological characterization of Steinitz rings*, 269.

Stringall, R. W. *The categories of p-rings are equivalent*, 229.

Teply, Mark. *A note on modules over a commutative regular ring*, 267.

17. Nonassociative Rings and Algebras

Hochschild, G. *Note on algebraic Lie algebras*, 10.

Thedy, Armin. *On rings satisfying* $[(a, b, c), d] = 0$, 250.

Wilson, Robert Lee. *Irreducible Lie algebras of infinite type*, 243.

20. Group Theory and Generalizations

LaTorre, D. R. *Modular congruences and the Brown-McCoy radical for semigroups*, 427.

Lindner, Charles C. *Construction of quasigroups using the singular direct product*, 263.

Richards, James W. *Abelian f.p.f. operator groups of type* (p, p), 1.

B. Analysis

26. Real Functions

Stoddart, A. W. J. *An extension of the Thomson principle*, 561.

28. Measure and Integration

Mukherjea, A. and Tserpes, N. A. *Idempotent measures on locally compact semigroups*, 143.

Walsh, Bertram. *Mutual absolute continuity of sets of measures*, 506.

30. Functions of a Complex Variable

Al-Amiri, Hassoon S. *On p-close-to-star functions of order* α, 103.

Beller, E. and Newman, D. J. *An* l_1 *extremal problem for polynomials*, 474.

*Chang, John S. M. *Rotational approximation*, 623.

Davie, A. M. and Øksendal, B. K. *Rational approximation on the union of sets*, 581.

*Dixon, John D. *A brief proof of Cauchy's integral theorem*, 625.

Glasner, Moses. *Energy-finite solutions of* $\Delta u = Pu$ *and Dirichlet mappings*, 553.

Liu, Ming-Chit. *On functions of bounded boundary rotation*, 345.

Maclachlan, Colin. *Modulus space is simply-connected*, 85.

Noonan, James W. *Coefficients of functions with bounded boundary rotation*, 307.

Rubinstein, Zalman and Saff, E. B. *Bounded approximation by polynomials whose zeros lie on a circle*, 482.

Saff, E. B. *Regions of meromorphy determined by the degree of best rational approximation*, 30.

Tse, Kam-Fook. *Nontangential interpolating sequences and interpolation by normal functions*, 351.

31. Potential Theory

Glasner, Moses. *Energy-finite solutions of* $\Delta u = Pu$ *and Dirichlet mappings*, 553.

Goldstein, Myron and Ow, Wellington H. *On the mean-value property of harmonic functions*, 341.

32. Several Complex Variables and Analytic Spaces

Busenberg, Stavros N. *Iterative solution of a Wiener-Hopf problem in several variables*, 39.

Hunt, L. R. *Real-analytic submanifolds of complex manifolds*, 69.

34. Ordinary Differential Equations

Bebernes, J. W. and Fraker, Ross. *A priori bounds for boundary sets*, 313.

Breuer, Shlomo and Gottlieb, David. *Separation of roots and oscillation in ordinary linear differential equations of second order*, 487.

Burton, T. and Grimmer, R. *On continuability of solutions of second order differential equations*, 277.

Deo, S. G. *On vector Lyapunov functions*, 575.
Etgen, G. J. and Scott, J. B. *On the conjugate points of fourth order, selfadjoint linear differential equations*, 349.
Grimm, L. J. *Existence and continuous dependence for a class of nonlinear neutral-differential equations*, 467.
Guggenheimer, H. *Geometric theory of differential equations.* II: *Analytic interpretation of a geometric theorem of Blaschke*, 87.
Hallam, Thomas G. *An asymptotic solution of a nonhomogeneous linear system of differential equations*, 529.
Hermes, Henry. *On continuous and measurable selections and the existence of solutions of generalized differential equations*, 535.

35. Partial Differential Equations

Cardoso, Fernando. *The identity of weak and strong extensions of pseudo-differential operators*, 118.
Diaz, J. B. and Young, Eutiquio C. *Uniqueness of solutions of certain boundary value problems for ultrahyperbolic equations*, 569.
Glasner, Moses. *Energy-finite solutions of $\Delta u = Pu$ and Dirichlet mappings*, 553.
Kreith, Kurt. *A class of comparison theorems for nonselfadjoint elliptic equations*, 547.

40. Sequences, Series, Summability

Fleming, D. J. and Jessup, P. G. *Perfect matrix methods*, 319.
Isaacs, Godfrey L. *A limitation theorem for absolute summability*, 47.
Leviatan, D. *Remarks on some Tauberian theorems of Meyer-König, Tietz and Stieglitz*, 126.
Rainwater, John. *Regular matrices with nowhere dense support*, 361.

41. Approximations and Expansions

Rubinstein, Zalman and Saff, E. B. *Bounded approximation by polynomials whose zeros lie on a circle*, 482.
Saff, E. B. *Regions of meromorphy determined by the degree of best rational approximation*, 30.

42. Fourier Analysis

Beller, E. and Newman, D. J. *An extremal problem for polynomials*, 474.
Busenberg, Stavros N. *Iterative solution of a Wiener-Hopf problem in several variables*, 39.
Cambanis, Stamatis. *Bases in L_2 spaces with applications to stochastic processes with orthogonal increments*, 284.
Ginsberg, Jonathan I. *Completeness of $\{\sin nx + Ki \cos nx\}$*, 291.
Moore, Berrien III. *The Szegö infimum*, 55.
Onneweer, C. W. *On moduli of continuity and divergence of Fourier series on groups*, 109.
Pigno, Louis. *Restrictions of L^p transforms*, 511.
Wade, William R. *Summing closed U-sets for Walsh series*, 123.

43. Abstract Harmonic Analysis

Mosak, Richard D. *Central functions in group algebras*, 613.

45. Integral Equations

Fox, Charles. *Solving integral equations by L and L^{-1} operators*, 299.

46. Functional Analysis

Carpenter, R. L. *Uniqueness of topology for commutative semisimple F-algebras*, 113.

Elliott, George A. *A characterization of compact groups*, 621.
Furuta, Takayuki and Nakamoto, Ritsuo. *Certain numerical radius contraction operators*, 521.
Giellis, George R. *Trace-class for a Hilbert module*, 63.
Hess, Peter. *A variational approach to a class of nonlinear eigenvalue problems*, 272.
Holbrook, John A. R. *The iterates of a contraction and its adjoint*, 543.
Lacey, H. Elton. *A note concerning* $A^* = L_1(\mu)$, 525.
Lambert, Alan. *Strictly cyclic weighted shifts*, 331.
Levin, Mark and Saxon, Stephen. *A note on the inheritance of properties of locally convex spaces by subspaces of countable codimension*, 97.
Lindberg, John A., Jr. *A class of commutative Banach algebras with unique complete norm topology and continuous derivations*, 516.
Moore, Berrien III. *The Szegö infimum*, 55.
Saxon, Stephen and Levin, Mark. *Every countable-codimensional subspace of a barrelled space is barrelled*, 91.
Strichartz, Robert S. *A note on Sobolev algebras*, 205.
Walsh, Bertram. *Mutual absolute continuity of sets of measures*, 506.
Wilansky, Albert. *Subalgebras of* $B(X)$, 355.
Willig, Paul. *Property* P *and direct integral decomposition of W-* algebras*, 494.

47. Operator Theory

Bunce, John. *The joint spectrum of commuting nonnormal operators*, 499.
Chow, T. R. and Gilfeather, F. *Functions of direct integrals of operators*, 325.
Furuta, Takayuki and Nakamoto, Ritsuo. *Certain numerical radius contraction operators*, 521.
Giellis, George R. *Trace-class for a Hilbert module*, 63.
Hasegawa, Minoru. *On quasi-analytic vectors for dissipative operators*, 81.
Hess, Peter. *A variational approach to a class of nonlinear eigenvalue problems*, 272.
Holbrook, John A. R. *The iterates of a contraction and its adjoint*, 543.
Holub, J. R. *Integral operators in Banach spaces*, 75.
Kirk, W. A. *A fixed point theorem for mappings with a nonexpansive iterate*, 294.
Lambert, Alan. *Strictly cyclic weighted shifts*, 331.
McIntosh, Alan. *Counterexample to a question on commutators*, 337.
Moore, Berrien III. *The Szegö infimum*, 55.
Ramanujan, P. B. and Patel, S. M. *Operators whose ascent is* 0 *or* 1, 557.
Saxon, Stephen and Levin, Mark. *Every countable-codimensional subspace of a barrelled space is barrelled*, 91.
Sehgal, V. M. and Thomas, J. W. *A fixed point theorem for semigroups of mappings with a contractive iterate*, 565.
Wilansky, Albert. *Subalgebras of* $B(X)$, 355.

49. Calculus of Variations and Optimal Control

Hermes, Henry. *On continuous and measurable selections and the existence of solutions of generalized differential equations*, 535.

D. Geometry

50. Geometry

Johnson, N. L. *A note on the construction of quasifields*, 138.

52. Convex Sets and Geometric Inequalities

Petty, C. M. *Equilateral sets in Minkowski spaces*, 369.

53. Differential Geometry

Banchoff, T. F. *High codimensional 0-tight maps on spheres*, 133.
Chen, Bang-yen. *Minimal hypersurfaces in an m-sphere*, 375.
———. *Errata to "On an inequality of T. J. Willmore,"* 627.
Glasner, Moses. *Energy-finite solutions of $\Delta u = Pu$ and Dirichlet mappings*, 553.

E. Logic and Foundations

02. Logic and Foundations

Larson, Loren C. *Nonstandard theory of Zariski rings*, 23.
*Nosal, Miloslav. *Series convergence on Boolean algebras*, 211.

F. Statistics and Probability

60. Probability Theory and Stochastic Processes

Cambanis, Stamatis. *Bases in L_2 spaces with applications to stochastic processes with orthogonal increments*, 284.
Jain, Naresh C. *A zero-one law for Gaussian processes*, 585.
Joffe, A. *On a sequence of almost deterministic pairwise independent random variables*, 381.
Mukherjea, A. and Tserpes, N. A. *Idempotent measures on locally compact semigroups*, 143.
Salehi, Habib. *On determination of the optimal factor of a nonnegative matrix-valued function*, 383.

G. Topology

22. Topological Groups, Lie Groups

Bagley, R. W. and Lau, K. K. *Semidirect products of topological groups with equal uniformities*, 179.
Elliott, George A. *A characterization of compact groups*, 621.
Flory, Volker. *On the Fourier-algebra of a locally compact amenable group*, 603.
Milnes, Paul. *Identities of group algebras*, 421.
Mosak, Richard D. *Central functions in group algebras*, 613.
Schochetman, I. *Nets of subgroups and amenability*, 397.
Wolf, Joseph A. *Remark on discrete subgroups*, 423.

54. General Topology

Anderson, B. A. *Families of mutually complementary topologies*, 362.
Aull, C. E. *Topological spaces with a σ-point finite base*, 411.
Fournier, Gilles. *On a problem of S. Ulam*, 622.
Keesling, James. *Proper mappings and dimension*, 202.
Kost, Frank. *Wallman-type compactifications and products*, 607.
O'Meara, Paul. *On paracompactness in function spaces with the compact-open topology*, 183.
Richardson, G. D. *Completions of uniform convergence spaces*, 159.
Rogers, James T., Jr. *Embedding the hyperspaces of circle-like plane continua*, 165.
Rogers, James T., Jr. and Tollefson, Jeffrey L. *Homogeneous inverse limit spaces with nonregular covering maps as bonding maps*, 417.
Seebeck, Charles L. III. *Tame arcs on wild cells*, 197.
Sehgal, V. M. and Thomas, J. W. *A fixed point theorem for semigroups of mappings with a contractive iterate*, 565.

Steiner, A. K. *On the topological completion of M-space products*, 617.
Wyler, Oswald. *A characterization of regularity in topology*, 588.

55. Algebraic Topology

Haslam, H. B. *A Whitehead type theorem*, 599.
Huneke, John Philip and Glover, Henry H. *Some spaces that do not have the common fixed point property*, 190.
James, I. M. *On the homotopy type of Stiefel manifolds*, 151.
Ledden, P. J. *Nonstable homotopy groups of Thom complexes*, 404.
Seebeck, Charles L. III *Tame arcs on wild cells*, 197.
Siegel, Jerrold. *k-invariants in local coefficient theory*, 169.

57. Manifolds and Cell Complexes

Banchoff, T. F. *High codimensional 0-tight maps on spheres*, 133.
Cantrell, J. C., Price, T. M. and Rushing, T. B. *A class of embeddings of S^{n-1} and B^n in R^n*, 208.
Chazin, R. L. *Stable thickenings in the topological category*, 175.
Keesling, James. *Locally compact full homeomorphism groups are zero-dimensional*, 390.
Ledden, P. J. *Nonstable homotopy groups of Thom complexes*, 404.
Seebeck, Charles L. III. *Tame arcs on wild cells*, 197.
Wright, Perrin. *Covering isotopies of M^{n-1} in N^n*, 591.
